

We recommend washing your vehicle post service, twice a month, especially after contact with rain.

Use plain water for car washing, regardless of which coating service you have had applied. Use our neutral cleaner if the vehicle is really dirty. Dirt will be able to be wiped off more easily and the protection of coating will be long-lasting.

We recommend a chamois towel for use with our coating. This towel is available for purchase from us and ensures to protect your paint coating.

If your vehicle comes into contact with the following:

- Bird Droppings
- Tree Sap
- Dead Insects
- Tar Oil
- Pollen
- Sand

Please ensure they are removed promptly, as these can damage the coating in a short amount of time. Our tip is to wash the vehicle with our Stubborn Dirt Cleaner to remove the majority, then hold a clean towel over the spot, and pour hot (above 80 degrees) water onto the area to dissolve.

COATING MAINTENANCE

From one month onwards, you can use Automated Car Wash Machines, but ensure you wipe the car clean with a chamois towel afterwards.

We recommend using only G'zox Car Cleaning products on coating and protection surfaces performed by us. Other cleaning products can affect the protection and water repellency offered by the coating.

Ensure you are returning regularly to have your car condition inspected by our technicians.
