Abrasion Resistant

Thickness/Hardness

Quartz Coating contains inorganic Polysilazane ingredients. After applying, it forms a transparent crystal body through a chemical reaction. It can be applied to protect a vehicle's body, and also provides protection for paint or plastic materials within ships and planes or even mobile phones and computers.

Quartz Coating can produce superior waterproof & anti-rust results. Therefore, it is suitable for vehicles that are parked outdoors long-term. It lasts approximately 18 months, with an extremely high hardness level. Quartz Coating can produce superior waterproof & anti-rust function. Therefore it suitable for long-term outdoor parking vehicles. The hardness of up to 7H, can significantly reduce the scars caused by a car wash.
