

REAL GLASS COATING

Wax, silicon, imitation soft enamels and other protective agents can be lost during a car wash allowing impurities to be absorbed into the paint. Our Real Glass Coating last approximately 12 months with a high-level of water repellency with a glass-based layer. An excellent shiny finish with a high level of hardness. The coating is heat resistant to 250 degrees. and it can also isolate dust, grease and other impurities ensuring that during a car wash these impurities are washed away.
