

Plastic parts are vulnerable to the impact of ultraviolet radiation, resulting in deterioration and bleaching phenomenon. Car washes can spray plastic parts with a silicone oil or wax to restore the luster, but the oil has a greasy feeling and is only a short-term solution. Quartz Coating can produce superior waterproof & anti-rust function. Therefore it is suitable for long-term outdoor parking vehicles. The hardness of up to 7H, can significantly reduce the scars caused by a car wash.

G'zox Nano Hard Resin Coating binds its nano molecular particles closely with the plastic surface to produce a layer of black gloss with the natural protective film. This can block UV penetration and extend the life of the plastic parts. It can be easily wiped clean when dead insects, dust, soot and other substances attach to it. This helps restore plastic parts back to their natural finish. This coating is heat resistant up to 300 degrees.
