

Wheel rims are close to the ground and are vulnerable to asphalt, dust and other impurities. It also protects against the damage caused by iron dust which can have a damaging effect on the paint inside the wheel, long term.

The traditional car wash industry cares about efficiency and will use high concentrations of strong acid and strong alkaline chemicals to clean the rims quickly. These chemicals will slowly corrode and damage your wheel rims.

GZOX Professional Wheel Coating contains a proprietary formula that not only has a brightening effect but also has comprehensive protection elements such as high hardness, high allocation of water, high heat resistant(700 °C) and anti-rust properties. It has an excellent final shine result and oil repellency.
